

Chris Perullo is the Director of Engineering at Turbine Logic. Mr. Perullo has 13 years of experience in gas turbine and combined cycle design, modeling and simulation, and analysis. He leads digital twin development which encompasses health monitoring, instrumentation fault detection, anomaly detection, and performance prediction. Before joining Turbine Logic, he was a Senior Research Engineer at Georgia Tech where he focused on a wide variety of advanced gas turbine simulation and monitoring methods for entities including NASA, the FAA, and major large frame and aircraft engine OEMs.
