

As a world renowned mathematician Cosimo has brought a unique lens to artificial intelligence, machine learning, and natural language processing for decades. His contributions in the fields of data science, graph theory, mathematical modeling, and predictive analytics have helped transform global supply chains and automation technologies. Cosimo is a Silicon Valley veteran who has held leadership positions for various early, mid, and late stage startups in the customer engagement technology and energy spaces. Prior to working in technology Cosimo was a Fullbright professor at the University of California at Berkeley and a professor at the University of Siena.
