

After graduation as a telecommunications engineer, François Beaudouin joined EDF R&D in 1989. His field of expertise covers multiple-criteria decision-making and decision under uncertainty in risk management.

He has been developing miscellaneous decision supports and expert systems dedicated to nuclear safety, environmental or O&M purposes for nuclear or hydro-power plants. His position as expert engineer allows him to promote decision-making theory for IA applications within EDF R&D.

For several years, he has taught regularly at Arts et Metiers ParisTech and has given training sessions devoted to decision modelling in IMDR (French Institute of Risk Management).
