

Maxime holds a master's degree in Mathematical Engineering from UC Louvain (Belgium). His fields of expertise are mathematical modeling, constraint programming, and (semi-)supervised learning. He is passionate about developing innovative algorithms to deal with the increased complexity and uncertainty arising from the energy transition. He is the N-SIDE product owner of the Outage Planning Optimization solution for System and Network Operators as well as the technical lead for N-SIDE on the European H2020 project "FlexPlan".
