

Richard Vilim is a Senior Nuclear Engineer at Argonne National Laboratory and heads the Plant Analysis & Control & Sensors Department in the Nuclear Science and Engineering Division. He has over 30 years of professional experience in the design and safety analysis of nuclear reactors with ongoing research projects involving modeling and simulation of nuclear systems, control system design for flexible operation, the use of energy storage for load leveling, and artificial intelligence and machine learning for realizing near autonomous operation. He received his Ph.D. from the Massachusetts Institute of Technology. He is an author on over 300 reports and publications and nine U.S. patents.
