

Stefan Börlin is currently working with nuclear automation applications and is based on the west coast of Sweden. He is a graduate from Chalmers University of Technology and participant at young age in ABB Atom Trainee program. Stefan has worked in various positions in different locations in Sweden, Finland, USA and The United Arab Emirates, not only in Nuclear, but also with cars, light rail vehicles and automatic guided vehicles. His assignments and tasks have mostly concerned solutions for instrumentation and control systems in safety applications. Lately Stefan has also been engaged in the development of requirement management methods and agile design processes in order to find the best suitable adaptations for Nuclear design activities. Privately, long story short, his life circles around family, gardening, carpeting, cooking, and creating trading robots. Another avid reader, former Toastmaster and author of ten books.
